## **DETAILED ACTION**

### ***Information Disclosure Statement***

The Information Disclosure Statement filed 05/25/05 via fax was not signed and there is no attached copy of PTO form PTO/SB/O8A (Formerly #1449).

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Urakawa (U. S. PAT. 6,414,525).

In claim 5, Urakawa teaches all claimed features in Fig. 7, a system for selecting a I/O buffer, comprising: a plurality of I/O buffers (10, 10a), each one having a different performance characteristic (buffer 10 drives signals A1, B1; wherein buffer 10a drives signals A2, B2); a plurality of transmission lines (1, 2); a receiving device (CHIP 2) coupled to the plurality of I/O buffers through a corresponding one of the plurality of transmission lines; a logic pulse generator (a circuit provides logic signals to 10 and 10a; not shown) for driving each one of the plurality of buffers with a logic signal, each one of the transmission lines producing a corresponding output logic signal (at nodes N2 and N12); and a signal analyzer (40) for observing the output signal produced by the plurality of buffers.

Art Unit: 2819

Method claim 5 corresponds to detailed circuitry already discussed similarly with regard to claim 1.

3. Claims 2 and 3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Claim 4 appears to comprise allowable subject matters.
